

DESCRIPTION

Lactimo is becoming a strong, proven performer on farms throughout New Zealand. It is a mono-germ fodder beet originating from France and has a yellow – orange tankard shaped bulb that sits approximately 45% above the ground. It is a high yielding variety with medium dry matter content at 15-17%, and very good disease and bolting tolerance. The crop can be grazed in-situ, or be lifted and fed whole or chopped.

AGRONOMIC TRAITS

Sowing season	Spring
Sowing rate (seeds/hectare)	80,000-100,000
Maturity* (days to grazing)	200+
Bulb % above ground	+/- 45%
Dry matter %	15 – 17%
Bolting tolerance	Very good
Disease resistance	Very good
<i>*Subject to management and climatic conditions</i>	

BENEFITS OF LACTIMO

- ▶ Proven performance in New Zealand
- ▶ Reliable, high yields
- ▶ Good seedling vigour and disease tolerance
- ▶ Suitable for sheep, cattle and deer for grazing in situ
- ▶ Available in handy 50,000 seed boxes
